

YUSUF TAHIR AJAH

Junior Full-Stack Developer / Software Engineering Intern

 Nigeria (Open to Remote, Hybrid & Relocation)  yusuftahirajah75@gmail.com  GitHub  LinkedIn

 Portfolio

PROFESSIONAL SUMMARY

Computer Science & IT undergraduate with hands-on experience designing, developing, and deploying full-stack web applications and backend RESTful APIs. Core technical background focused on React, Node.js, Express.js, and PostgreSQL, with practical implementation of relational database design, JWT authentication, request validation, and defensive security. Experienced in working through structured Git feature-branch workflows and API specification design. Seeking a Junior Full-Stack Developer or Software Engineering Internship role to contribute clean, tested, and maintainable code to modern engineering teams.

TECHNICAL SKILLS

Primary Stack:	React, JavaScript (ES6+), TypeScript, Node.js, Express.js, PostgreSQL, RESTful APIs
Databases & ORMs:	PostgreSQL, SQL (Parameterized Queries), Prisma, MongoDB, Mongoose
Backend & Security:	JWT, HTTP-Only Cookies, bcrypt, Role-Based Access Control (RBAC), Zod, Joi
Tools & Testing:	Git, GitHub, Postman, Swagger/OpenAPI, Docker (Basics), Render, Vercel
Core Concepts:	Relational Database Design, Controller-Service-Repository Architecture, Agile/Git Flow

SELECTED ENGINEERING PROJECTS

TrustOS Intelligence DEPLOYED LIVE *Founder & Full-Stack Developer*

React • Node.js • Express.js • PostgreSQL • REST API • Render

- Architected and implemented a full-stack digital trust platform designed to calculate and expose risk-scoring metrics for digital interactions.
- Engineered backend risk-assessment services processing URL, email, phone number, and regional threat signals into normalized score metrics.
- Implemented strict schema validation using Zod and parameterized SQL queries to safeguard endpoints against SQL injection and malformed inputs.
- Deployed client and API services to Render with environment variable configurations and continuous deployment pipeline from GitHub.

PayRescue NG PERSONAL PROJECT *Full-Stack Engineer & Creator*

TypeScript • React • Node.js • Express.js • Prisma • PostgreSQL

- Developed a specialized financial transaction recovery and payment dispute management application using TypeScript across client and server.
- Designed cryptographic evidence storage logic leveraging SHA-256 hashing to secure transaction reconciliation records against tampering.
- Modeled normalized PostgreSQL schemas and database migrations using Prisma ORM to ensure structural integrity across dispute lifecycle states.

PERN Authentication System PERSONAL PROJECT *Full-Stack Developer*

PostgreSQL • Express.js • React • Node.js • JWT • bcrypt

- Built an end-to-end user authentication system implementing user registration, secure credential verification, login, and session clearance.

MVPLaunch NG & OpportunityOS

PERSONAL PROJECTS

Full-Stack Developer

React • Node.js • Express.js • PostgreSQL • SQL Migrations

- Structured Node.js/Express backend applications utilizing the Controller-Service-Repository architecture pattern for clear separation of concerns.
- Executed database schema migration workflows and relational modeling with explicitly typed foreign key constraints and indexed columns.
- Integrated RESTful application management workflows ensuring standardized HTTP status handling and predictable API error responses.

Volunteer & NGO Impact Tracker

COLLABORATIVE CAPSTONE

Backend Developer

Node.js • Express 5 • MongoDB • Mongoose • Git Flow

- Collaborating in a team setup utilizing Git feature branches, strict commit conventions, and peer pull-request reviews.
- Engineered opportunity lifecycle state machines managing resource progression across Draft, Published/Active, and Completed states.
- Implemented authorization middleware enforcing organization-level Role-Based Access Control (RBAC) across Express endpoints.

AgriVerify

IN PROGRESS

Backend Developer

Node.js • Express.js • PostgreSQL • Prisma • SHA-256

- Designing relational database schemas for agricultural batch tracking, checkpoint auditing, and verify-on-demand event logs.
- Prototyping SHA-256 hash chaining verification logic to simulate immutable batch provenance and QR-code payload verification.

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science & IT

Expected Graduation: 2028

Federal University Dutsin-Ma (FUDMA) — Katsina State, Nigeria

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming (OOP), Computer Systems & Networking, Fundamentals of Cybersecurity.

ENGINEERING PRACTICES & METHODOLOGIES

- **Version Control Workflow:** Daily practice of feature-branch workflows, rebasing, clear atomic commits, and pull-request documentation on GitHub.
- **API Testing & Documentation:** Testing REST endpoints using Postman collections and defining clear API specifications with OpenAPI/Swagger.
- **Defensive Software Design:** Prioritizing strict input validation, HTTP-only cookie storage, contextual error logging, and parameterized SQL queries across projects.
